The application has following characteristics;

- 1) There should be header for the application in **h1** Inventory Management System.
- 2) In next line, it need to display a **hr** with id="rule1" and width as 100%.
- 3) Create a **p** tag with id="menu" and align to center.
- 4) Create an **anchor** tag with id="menu1" and href="page1.html" and value as "Registration".
- 5) In the next line, create an **anchor** tag with id="menu2" and href="page2.html" and value as "List".
- 6) In the next line, create an **anchor** tag with id="menu3" and href="page3.html" and value as "Search".
- 7) In next line, it need to display a **hr** with id="rule2" and width as 100%.
- 8) Display a footer for the application as "(c) My App 2018-19." in **h4**.
 - Use `cd menus` command to move into application folder.
 - Use `npm install` to install the required packages.
 - Use `npm start` to launch the application.

For web preview click the below link. <https://2886795296-8000-xplore01.environments.katacoda.com/>

To test your application Use `npm test` command.

Click **Summary** button to verify the test results.

ANSWER

```
<html>
<head>
<title>Question2</title>
</head>
<body>
<header><h1>Inventory Management System</h1></header>
<hr id="rule1" style="width:100%"></hr>
```

```

<p id="menu" style="text-align:center">
<a id="menu1" href="page1.html">Registration</a>
<a id="menu2" href="page2.html">List</a>
<a id="menu3" href="page3.html">Search</a>
</p>
<hr id="rule2" style="width:100%"></hr>
<footer><h4>my app 2018-19.</h4></footer>
</body>
</html>

```

3. LIST CUSTOMERS IN A TABULAR FORMAT

Instruction

- Create a web application which will display a Home page with different menu items.

The application has following characteristics;

- 1) The Customer Listing screen should display list of customers in table format.
- 2) The table should have id="custList" and the following characteristics {border=1;width=80%;align=center}.
- 3) Display the following customer list in the table.

Customer Id	Name	Gender	City
100001	Akshay Kumar	Male	Chennai
100002	Shyama P	Female	Trivandrum
100003	Nalini Kumari	Female	Bangalore
100004	Raj Shyam	Male	Chennai
100005	Sundar G	Male	Mangalore
100006	Kishore P	Male	Calicut

- 4) The table header should have a back-ground colour of #42aaf4.

Note:

All the styles need to be implemented using inline.

- Use `cd tables` command to move into application folder.
- Use `npm install` to install the required packages.
- Use `npm start` to launch the application.

For web preview click the below link. <https://2886795280-8000-xplore01.environments.katacoda.com/>

To test your application Use `npm test` command.

Click **Summary** button to verify the test results.

ANSWER

```
<html>
<head>
<title>Question3</title>
</head>
<body>
<h2>customer listing</h2>
<table id="custList" style="border:1px; width:80%; text-align:center">
<tr style="background-color:#42AAF4">
<th>Customer Id</th>
<th>Name</th>
<th>Gender</th>
<th>City</th>
</tr>
<tr>
<td>100001</td>
<td>Akshay Kumar</td>
<td>Male</td>
<td>Chennai</td>
</tr>
```

100002
Shyama P
Female
Trivandrum

100003
Nalini Kumari
Female
Bangalore

100004
Raj Shyam
Male
Chennai

100005
Sundar G
Male
Mangalore

100006
Kishore P
Male
Calicut

<!-- Design & Develop your code here -->

</body>

</html>

4. FORM FOR ADDING BOOKS

Instruction

- Create a web application which is used to add a book to the library.

The application has following characteristics;

1) The Add Book form consist of following attributes.

Label	Control

Book Name	Text Box
Category	Dropdown Box
Available	Radio Button
Add	Submit
Cancel	Reset

2) There is a form header as "Add Book" in **h2**

3) Create a text box for reading the value for Book Id, the text box name should be "bookId".

4) Create a text box for reading the value for Book Name, the text box name should be "bookName".

5) The Category drop down consist of following values [Action, Drama, Comedy, Childrens] with id as "category".

6) The radio button have following value [Available, Not Available] with name as "availability".

7) Upon clicking the [Cancel] button the contents in the form need to be reset. The Cancel button should be named as "cancel".

8) The Add button should be named as "add".

9) Both the buttons (Add as well as Cancel) should have the background color as #2345E4.

10) The form should have the name as "addBook".

- Use `cd basicform` command to move into application folder.
- Use `npm install` to install the required packages.
- Use `npm start` to launch the application.

For web preview click the below link. <https://2886795417-8000-xplore02.environments.katacoda.com/>

To test your application Use `npm test` command.

Click **Summary** button to verify the test results.

ANSWER

```
<html>
<head>
<title>Question4</title>
<body>
<h2>Add Book</h2>
<form name="addBook">
Book Id<input type="text" name="bookId"></br>
Book Name<input type="text" name="bookName"></br>
Category<select id="category">
<option value="Action">Action</option>
<option value="Drama">Drama</option>
<option value="Comedy">Comedy</option>
<option value="Childrens">Childrens</option></select></br>
Available<input type="radio" name="availability">Available<input type="radio"
name="availability">Not Available</br>
<input type="reset" name="reset" placeholder="cancel" style="Background-color: #2345E4">
<input type="submit" name="submit" placeholder="add" style="Background-color: #2345E4">
</body> </html>
```

5. CUSTOMER REGISTRATION WITH VALIDATION

Instruction

- The Customer Registration form with following attributes and its validations.

The application has following characteristics;

1) The Add Book form consist of following attributes.

Label	Control
Customer Id	Text Box
Customer Name	Text Box
City	Dropdown Box
Gender	Radio Button
Create	Submit
Cancel	Reset

2) There should be header for the form in **h1** ie; Customer Registration.

3) The form should have the name='registerCustomer' and id='registerCustomer'.

4) Create a text box for reading the value for Customer Id, the text box name should be "customerId".

NB: Don't use javascript validation, instead use the built in form level validations.

- Use `cd formvalidation` command to move into application folder.
- Use `npm install` to install the required packages.
- Use `npm start` to launch the application.

For web preview click the below link. <https://2886795276-8000-xplore01.environments.katacoda.com/>

To test your application Use `npm test` command.

Click **Summary** button to verify the test results.

ANSWER

```
<html>
<head>
<title>Question5</title>
<body>
<h1>Customer Registration</h1>
<form name="registerCustomer" id="registerCustomer">
Customer Id<input type="text" name="customerId" maxlength="6" required></br>
Customer Name<input type="text" name="customerName" required></br>
City<select id="city" required>
<option value="Chennai">Chennai</option>
<option value="Mumbai">Mumbai</option>
<option value="Delhi">Delhi</option>
<option value="Trivandrum">Trivandrum</option></select></br>
Gender<input type="radio" name="gender" required>Male<input type="radio"
name="gender">Female</br>
<input type="reset" name="reset" placeholder="cancel" style="Background-color: #2345E4">
<input type="submit" name="submit" placeholder="create" style="Background-color: #2345E4">
</body>
</html>
```

6. CUSTOMER CART
